

Image Intensifier

An image intensifier allows surgeons to see real time images on a monitor during surgical procedures. It is used during the repair of bone fractures, the placement of catheters for both chemotherapy and renal dialysis and the checking for the presence of gall stones.

Anaesthetic Machine

A new state-of-the-art anaesthetic machine which has more advanced ventilation and gas delivery.

Colonoscope

A colonoscope allows the surgeon to see the inside of the colon on a video monitor in real time. It also has the ability to take tissue samples and is used in the diagnosis of bowel cancer.

Urology Instruments

These additional urology instruments will eliminate the need for patients to travel to Melbourne for the diagnosis and treatment of prostate cancer.

Blanket Warming Cabinet

This special machine warms blankets. Warmed blankets help patients maintain a normal body temperature. This aids with recovery and also provides comfort and reassurance.
